PROFESSIONAL SUMMARY

Computer Science student at FAST NUCES building backend systems and APIs in Go and NestJS/TypeScript, with production experience in multi-tenant architecture, and PostgreSQL/MySQL. Also builds cross-platform apps with Flutter and React.

EDUCATION

FAST NUCES, Lahore

BS Computer Science

Aug 2023 – Present

EXPERIENCE

Bookme, Lahore

Backend Engineer Intern

July 2026 – Aug 2026

NestJS, TypeORM, MySQL, Redis, BullMQ, R2

- Built modules for RTBS, a multi-tenant restaurant booking platform using NestJS, TypeORM, and MySQL, with domain events driving commission accrual and notification workflows.
- Implemented a transactional booking state machine with row-level locking to prevent double-booking, and used Redis/BullMQ for async notification queues and dashboard caching.
- R2 storage with presigned URLs for logo and floor-photo uploads.

Highnoon Laboratories, Lahore

Software Engineering Intern

July 2025 – Aug 2025

Go, Cloudflare Workers AI, ChromaDB, PostgreSQL, Docker

- Built and deployed **Quirk** in Go with Cloudflare Workers AI, ChromaDB, JWT authentication, and PostgreSQL token storage.
- Dockerized the Go service and added PDF, CSV, JSON, and Markdown export features during the internship.

TECHNICAL SKILLS

Languages: Go, C++, C#, Dart, Python, JS, TS, SQL

Frameworks: NestJS, Express, Node.js, Flutter, Riverpod, React, Next.js, .NET WinForms, Raylib, ADO.NET

Databases: PostgreSQL, MySQL, SQL Server (T-SQL), Supabase, ChromaDB

Tools: Docker, Git, REST APIs, JWT, WebSockets, Redis, CMake

TECHNICAL PROJECTS

Quirk

Go, PostgreSQL, Docker, Next.js

- Built an AI-powered knowledge search system for querying uploaded PDF, CSV, JSON, and Markdown files.
- Implemented a Go RAG pipeline with chunking, Cloudflare Workers AI embeddings, and ChromaDB semantic search.
- Developed a Go REST API with JWT auth, PostgreSQL migrations, Docker deployment, and a Next.js frontend.

Khelgaah

Flutter, Go, PostgreSQL

- Built a sports venue booking platform for players, venue owners, and tournament organizers.
- Developed the Flutter and Go booking workflow with real-time timeslot management and confirmation flows using REST APIs.
- Implemented transactional PostgreSQL operations and booking checks to prevent double-bookings.

Nudge

Flutter, Supabase, PostgreSQL

- Built a personal finance app for tracking recurring bills and missed payments.
- Developed a Flutter dashboard with Riverpod, Supabase PostgreSQL, and WebSockets for live bill and payment updates.
- Added automated missed-payment email alerts using Supabase Edge Functions and database webhooks.

Penance (Platformer Game)

C++17, CMake, Raylib

- Built a 2D action platformer with enemy AI and story-driven gameplay.
- Implemented modular game logic in C++ and Raylib with a finite state machine for enemy behavior.
- Created a dialogue system from external text files and set up CMake for easier multi-platform builds.

Football Management System

Next.js 15, Node.js, Express, SQL Server

- Built a league management platform for organizing teams, players, matches, and admin tasks.
- Developed the Next.js frontend and Node.js/Express APIs for team, player, and match management workflows.
- Designed a SQL Server database with JWT authentication and role-based access control.
